# CATERPILLAR LAMP

# WHERE FUNCTIONAL MODULARITY MEETS AESTHETICS

## ILLUMINATE

Why settle for a generic lamp? Not all lamps are created equal, nor should they be. Accentuate and differentiate your living space with a light source that is a perfect synergy of form and function. The Caterpillar / Lamp is a luminous step in the right direction. Lay it flat, stand it up, rest it on something. The choice is yours. But don't forget that proper illumination is an often overlooked form of flattery and decoration.

## PERPETUATE

With the increasing demand for an eco-friendly lifestyle, the Caterpillar / Lamp is a pillar of environmental sustainability. Manufactured from FSC-certified, 0.25" thick Plyboo, structured illumination has never shed more light on one of the most important concerns—our planet. Plyboo veneer is made from bamboo—specifically, purpose-specific young growth forests that are free of pesticides or harmful formaldehydes. The lamp is also available in either metal or plastic.

## DESIGN

The inspiration for Caterpillar / Lamp comes from the tubular and segmented bodies of the larval forms of the insect order Lepidoptera. Its design philosophy is to serve as a reminder of how interior design and architecture are evolving randily towards customization, flexibility, and adaptability.
